

CONSERVATION EASEMENT

STATE OF FLORIDA:

COUNTY OF LEON:

THIS CONSERVATION EASEMENT is hereby made and entered into on this 21st day of May, 2010 by Cortona Hills, LLC., whose mailing address is 15125 N. Meridian Road, Tallahassee, Florida 32312, hereinafter referred to as the "Grantor", to LEON COUNTY, FLORIDA, a political subdivision of the State of Florida, whose mailing address is 301 South Monroe Street, Tallahassee, Florida 32301, hereinafter referred to as the "Grantee".

WITNESSETH:

For and in consideration of the mutual promises and other good and valuable consideration as set forth herein, the receipt and sufficiency of which is hereby acknowledged, the Grantor does hereby grant to the Grantee, its successors and assigns, a perpetual Conservation Easement in accordance with Section 704.06, Florida Statutes, over and across the real property more particularly described on Exhibit "A", which is attached hereto and expressly incorporated herein, on the terms and conditions hereinafter set forth:

The following activities are prohibited within this easement, pursuant to Section 704.06, Florida Statutes:

1. Construction or placing of buildings, roads, signs, billboards or other advertising, utilities, or other structures above or on the ground.
2. Dumping or placing of soil or other substance or material as landfill, or dumping or placing of trash, waste, or unsightly or offensive materials.
3. Removal or destruction of trees, shrubs, or other vegetation.
4. Excavation, dredging, or removal of loam, peat, gravel, soil, rock, or other material substance in such matter as to affect the surface.
5. Surface use except for purposes that permit the land or water area to remain predominately in its natural condition.
6. Activities detrimental to drainage, flood control, water conservation, erosion control, soil conservation, or fish and wildlife conservation habitat preservation.
7. Acts or uses detrimental to such retention of land or water areas.
8. Acts or uses detrimental to the preservation of the structural integrity or physical appearance of sites or properties of historical, architectural, archeological, or cultural significance.

Notwithstanding the foregoing, the Grantor shall be permitted to perform the activities set forth in the management plan attached hereto as Exhibit "B", which also addresses other conditions of this easement.

It is understood that the granting of this easement entitles the Grantee to enter the above-described land in a reasonable manner and at reasonable times to assure compliance with the conditions of this easement.

Grantor hereby fully warrants the title to said real property and will defend the same against the lawful claims of all persons whomsoever claimed by, through or under it, that it has good rights and lawful authority to grant this easement and that the same is unencumbered.

Where the context of this easement requires, allows or permits, the same shall include the successors or assigns of the parties.

The easement granted hereby shall run with the land and shall ensure to the benefit of the Grantee and its successors and assigns.

IN WITNESS WHEREOF, Grantor has caused these covenants to be executed and its seal to be affixed hereto on the day and year first above written.

INSTALLATION & MANAGEMENT NOTES FOR BUFFER AREAS

GENERAL

Existing herbaceous and woody perimeter vegetation (not surveyed) was field located & shall be utilized in all buffer areas, in conjunction with proposed plants, to provide adequate screening as shown per detail (as required by the E.M.O.) If plant material is necessary, the following guidelines shall be utilized.

INSTALLATION

No soil amendments are necessary.

Provide plant material complying with Florida #1 classification in "Grades and Standards for Nursery Plants, second edition, published by the Florida Department of Agriculture, Division of Plant Industry, Gainesville, Florida. Provide trees and shrubs grown in a recognized nursery in accordance with good horticultural practice. Provide healthy, vigorous stock grown under climatic conditions similar to conditions in the locality of the project and free of disease, insects, eggs, larvae, and defects such as knots, sun scald, injuries, abrasions or disfigurements.

Warrant all plant material for a period of one year after date of substantial completion. Remove and replace trees, shrubs or other plants found to be dead or in unhealthy condition during warranty period.

Excavate well for trees with vertical sides and with bottom of excavation at a level so that the top of the root ball of the plant is 10% higher than the finish grade. Excavation for shrubs shall be set so that the top of the root ball is at the same elevation as adjacent finished landscape grades or up to one-half inch higher, but not lower than adjacent grades. Excavations must be at least twice as wide as the plant's root ball diameter. Fill excavations for trees and shrubs with water and allow to percolate out before planting.

Set the top of the root ball to the correct height as indicated. Once the plant is set, re-fill the hole with backfill soil, firming it as it is added to eliminate voids and air pockets. Water plants thoroughly after adding backfill. Dish top of planting soil mixture to allow for mulching.

Install pine straw mulch around newly planted trees and shrubs at two to three times the diameter of the crown spread and a minimum of 3" compacted thickness.

Apply anti-desiccant using power spray to provide an adequate film over trunks, branches, stems, twigs and foliage.

Stake or support trees if needed immediately after planting.

Plants shall be pruned to remove all broken, dead and diseased limbs. Any cross-rubbing wood should be removed to prevent disease. Never remove more than one-quarter of a live tree crown in a single year.

Conform to all applicable state fertilizer laws and manufacturer's instructions.

Trees and shrubs and sod: use 15-5-15 granular, non-burning product, with micronutrients, and half of the nitrogen is to be in a slow release form. Broadcast fertilizer over the area of root

growth at a rate of (6) pounds per 1000 square feet of landscape area. Apply in the spring and fall.

Contractor shall provide a temporary irrigation system or manually irrigate from water source/water truck until landscaping is established. All irrigation lines shall be installed so as to not impact the critical protection zone of protected trees used as credit. These protected trees shall be clearly marked in the field and any necessary irrigation disturbance shall be approved by the consulting landscape architect prior to installation. Contractor shall notify county inspectors in advance prior to any potential disturbance. Irrigation of plantings shall comply with the water management guidelines of the region. Irrigation shall be provided throughout the spring, fall, and in summer drought periods. Irrigate everyday for the first 90 days after approved installation.

MAINTENANCE

Mechanical methods that do not compact the earth or impair root systems shall be allowed in general maintenance activities. No storing of items or hazardous materials shall occur within this area.

Plants shall be pruned regularly to remove all broken, dead and diseased limbs, any cross-rubbing wood, suckers and water sprouts. No other pruning to reduce size shall be performed. Do not prune branches with a flush cut, but instead cut to the outside of the branch collar. All pruning cuts shall be clean and free of any paints or sealers.

Fertilizer may be applied in the spring and fall (use low nitrogen in the fall). In the spring broadcast 15-5-15 fertilizer over the area of root growth at a rate of six (6) pounds per 1,000 square feet. In the fall broadcast 15-5-15, 5-5-20, 5-0-15 or 5-0-20 fertilizer over the area of root growth at a rate of ten (10) pounds per 1,000 square feet. Use a granular, non-burning product, with micronutrients and half of the nitrogen is to be in a slow release form. Fertilizer shall be applied per manufacturer's instructions. Nutrient absorption will be affected by soil ph. Specific evaluation of this nutrient/ph relationship may be necessary if plant performance is low.

Pest control should only be applied as necessary. An integrated pest management system for establishing a healthy environment for proper growth conditions is the preferred method for pest control. Non-toxic horticultural oil recommended. Apply a broad-spectrum foliar herbicide to mulched areas as needed by spot spraying.

No mowing or line trimming shall be performed.

The minimum watering schedule for newly planted material shall be a minimum of 1" per week. Water should be applied in the early morning hours. Water regularly for one year or until established. Deep, infrequent soakings, which allow the soil moisture to drain, is the watering method preferred for established plants. This type of soaking will encourage a deep root system, which will enable the plant to withstand periods of drought.

The HOA accepts the responsibility of maintaining all landscaping in perpetuity, to include proper water, fertilization, weeding, pruning, pest control and replacement or replanting, if necessary.
