PROJECT NOTES:

THE LEON COUNTY DEPARTMENT OF PUBLIC WORKS SEEKS TO IMPROVE DRAINAGE PATTERNS WITHIN THE FORD'S ARM SOUTH WATERSHED IN ORDER TO REMEDIATE EXISTING FLOODING CONDITIONS THROUGHOUT THE PROJECT CORRIDOR. THE TRIBUTARY LIES WITHIN THE FORD'S ARM WATERSHED OF THE LAKE JACKSON BASIN. THE PROJECT WILL INCLUDE THE INSTALLATION OF THREE-5 FT X 10 FT CONCRETE BOX CULVERTS AND TWO-24-IN CROSS DRAINAGE CULVERTS UNDER MERIDIAN ROAD. THE CONSTRUCTION OF THE NEW STORM STRUCTURES WILL REQUIRE SEVERAL TREES WITHIN THE CANOPY ROAD PROTECTION ZONE LIMITS TO BE REMOVED TO INSTALL THE NEW STRUCTURES WITH END TREATMENTS, GRADE AREAS ADJACENT TO THE PROPOSED IMPROVEMENTS AND IMPLEMENT SUSTAINABLE LOW IMPACTS SOLUTIONS WITHIN OPEN CHANNEL IMPROVEMENTS. LAND DISTURBANCE OF 1.93 ACRES (AC.) IS EXPECTED TO OCCUR.

PROJECT CONSTRUCTION PHASING

THE PROJECT WILL BE CONSTRUCTED IN MULTIPLE PHASES (ILLUSTRATED ON SHEET G-104);

PHASE A: EAST SUMP IMPROVEMENTS AND DRAINAGE CONVEYANCE SYSTEMS IMPROVEMENTS INTO THE EAST SUMP.

PHASE B: WEST SUMP IMPROVEMENTS, LEXINGTON ROAD DRAINAGE CONVEYANCE SYSTEM, AND JOHN HANCOCK DRAINAGE CONVEYANCE SYSTEM. PHASE WILL INCLUDE ASSOCIATED WATER & SEWER UTILITITY ADJUSTMENTS.

LATERAL JOINTS SHALL BE STAGGERED TO PROMOTE MORE UNIFORM GROWTH AND STRENGTH. CARE SHALL BE EXERCISED TO ENSURE THAT SOD IS NOT STRETCHED OR OVERLAPPED AND THAT ALL JOINTS ARE BUTTED TIGHT IN ORDER TO PREVENT VOIDS WHICH WOULD CAUSE DRYING OF THE ROOTS.
12. ON SLOPES 3:1 OR GREATER, OR WHEREVER EROSION MAY BE A PROBLEM, SOD SHALL BE LAID WITH STAGGERED JOINTS AND SECURED BY PEGGING OR OTHER APPROVED METHODS. SOD SHALL BE INSTALLED WITH THE LENGTH PERPENDICULAR TO THE SLOPE (ON THE CONTOUR). BEGIN LAYING SOD AT THE BOTTOM OF THE SLOPE AND WORK UPHILL.
13. AS SODDING OF CLEARLY DEFINED AREAS IS COMPLETED, SOD SHALL BE ROLLED OR TAMPED TO PROVIDE FIRM CONTACT BETWEEN ROOTS AND SOIL.

SLOPE STABILIZATION SYSTEM GENERAL INSTALLATION GUIDELINES / NOTES

1. Contractor shall provide ARMORMAX® 75, or approved equal for permanent erosion protection and surficial slope stability in vegetated and unvegetated applications. It is composed of two components: PYRAMAT® 75 High Performance Turf Reinforcement Mat (HPTRM) and Engineered Earth Anchors. ARMORMAX® 75 shall be provided in green (match color). Contractor shall submit shop drawings of all or-equal products as part of the bid submittal.
2. Contractor shall provide PYRAMAT 75 HPTRM, or approved equal in green for erosion control applications on steep slopes and vegetated waterways.
3. The Type B2 anchor model, or approved equal is used for surficial slope stability applications and has a working load of up to 1,500 lbs. The Type B2 anchor consists of a die cast aluminum anchor head, zinc-aluminum coated carbon steel cable, a die cast zinc load-locking mechanism with a ceramic roller, and two aluminum ferrules. The Type B2 anchor is also designed with a recessed cavity so the top of the cable can be cut below the surface being protected.
4. The 12", 18", and 24" Securing Pins are composed of a wire, mushroomed at the top. These Pins shall conform to industry standards for erosion control pins with washers.
5. Contractor shall provide LANDLOK® S2 Erosion Control Blankets, or approved equal which contain 100% wheat straw mechanically bound and covered on both sides by netting. The straw shall be homogeneously blended and evenly distributed throughout the blanket. The netting shall be photodegradable polypropylene with mesh openings of approximately 3/8 in. by 3/8 in. The blanket shall be sewn on approximately 2 in. centers with photodegradable polypropylene thread.
6. Prepare seedbed by loosening 2 to 3 in of soil above final grade. Apply seed in an amount equivalent to 60% of the total mixture required to be installed on the soil surface, to scarified surface prior to installation of the ARMORMAX 75. Select and apply soil amendments and fertilizer, to scarified surface prior to installation of the ARMORMAX 75. A site specific soil test should be performed to help determine what soil amendments, such as lime and fertilizer, need to be incorporated into the soil to promote native vegetation.
7. Once installed, ARMORMAX 75 shall be soil filled and seeded with the remaining 40% of the seed mixture. Do not place excessive soil above material. Once soil fill and additional seed is in place, surficial protection should be accomplished by installing LANDLOK S2 Erosion Control Blanket atop the seed layer. LANDLOK S2 is to be secured using 6" U-shaped staples with a frequency of 2.0 staples per square meter (1.7 staples per square yard).
8. Irrigate to establish and maintain vegetation. Frequent, light irrigation will need to be applied to seeded areas if natural rain events have not occurred within two weeks of seeding. When watering seeded areas, use a fine spray to prevent erosion of seeds or soil. Do not over irrigate.

HORIZONTAL ANCHOR SPACING	4.0 FT.
VERTICAL ANCHOR SPACING	3.0 FT.

NOTE:

PRIOR TO FINAL ACCEPTANCE, ANCHOR TESTING SHALL BE PERFORMED BY THE CONTRACTOR TO CONFIRM THE PULLOUT STRENGTH OF THE ANCHORS IS APPROPRIATE AND COMPLIES WITH MANUFACTURER RECOMMENDATIONS. ADDITIONAL ANCHORS LENGTHS OR SIZES MAY BE NEEDED TO ACHIEVE THE REQUIRED PULLOUT STRENGTH,

SCOURLOK™ SHORELINE DEFENSE SYSTEM(SDS) GENERAL INSTALLATION GUIDELINES / NOTES

1. CONTRACTOR SHALL PROVIDE SCOURLOK™ SHORELINE DEFENSE SYSTEM (SDS), OR APPROVED EQUAL. CONTRACTOR SHALL SUBMIT SHOP DRAWINGS OF ALL OR-EQUAL PRODUCTS AS PART OF THE BID SUBMITTAL.
2. CONTRACTOR SHALL PROVIDE ARMORMAX 75, OR APPROVED EQUAL FOR PERMANENT EROSION PROTECTION AND SURFICIAL SLOPE STABILITY. ARMORMAX 75 SHALL BE GREEN IN COLOR.
3. CONTRACTOR SHALL PROVIDE PYRAMAT 75 HPTRM, OR APPROVED EQUAL IN GREEN FOR EROSION CONTROL APPLICATIONS ON STEEP SLOPES AND VEGETATED WATERWAYS.
4. THE TYPE B2 ANCHOR MODEL, OR APPROVED EQUAL IS USED FOR SURFICIAL SLOPE STABILITY APPLICATIONS AND HAS A WORKING LOAD OF UP TO 1,500 LBS. THE TYPE B2 ANCHOR CONSISTS OF A DIE CAST ALUMINUM ANCHOR HEAD, ZINC-ALUMINUM COATED CARBON STEEL CABLE, A DIE CAST ZINC LOAD-LOCKING MECHANISM WITH A CERAMIC ROLLER, AND TWO ALUMINUM FERRULES. THE TYPE B2 ANCHOR IS ALSO DESIGNED WITH A RECESSED CAVITY SO THE TOP OF THE CABLE CAN BE CUT BELOW THE SURFACE BEING PROTECTED.
5. THE 12", 18", AND 24" SECURING PINS ARE COMPOSED OF A WIRE, MUSHROOMED AT THE TOP. THESE PINS SHALL CONFORM TO INDUSTRY STANDARDS FOR EROSION CONTROL PINS WITH WASHERS.
6. HOG RING TO BE 16 GAUGE STAINLESS STEEL, OR APPROVED EQUAL TO BE INSTALLED AT 2' MAXIMUM LONGITUDINAL SPACING.
7. SECURING BOLT TO BE 5" LONG, 3/4" DIAMETER GALVANIZED STEEL BOLT OR APPROVED EQUIVALENT TO BE EMBEDDED 3" MINIMUM INTO CONCRETE STRUCTURE AT 2' MINIMUM LONGITUDINAL SPACING FOR ATTACHMENT OF ARMORMAX 75, OR APPROVED EQUAL BY GALVANIZED NUT AND 1.5" DIAMETER MINIMUM WASHER.
8. PREPARE SEEDBED BY LOOSENING 2 TO 3 IN OF SOIL ABOVE FINAL GRADE. APPLY SEED IN AN AMOUNT EQUIVALENT TO 60% OF THE TOTAL MIXTURE REQUIRED TO BE INSTALLED ON THE SOIL SURFACE, TO SCARIFIED SURFACE PRIOR TO INSTALLATION OF THE ARMORMAX 75. SELECT AND APPLY SOIL AMENDMENTS AND FERTILIZER, TO SCARIFIED SURFACE PRIOR TO INSTALLATION OF THE ARMORMAX 75. A SITE SPECIFIC SOIL TEST SHOULD BE PERFORMED TO HELP DETERMINE WHAT SOIL AMENDMENTS, SUCH AS LIME AND FERTILIZER, NEED TO BE INCORPORATED INTO THE SOIL TO PROMOTE NATIVE VEGETATION.
9. ONCE INSTALLED, ARMORMAX 75 SHALL BE SOIL FILLED AND SEEDED WITH THE REMAINING 40% OF THE SEED MIXTURE. DO NOT PLACE EXCESSIVE SOIL ABOVE MATERIAL. ONCE SOIL FILL AND ADDITIONAL SEED IS IN PLACE, SURFICIAL PROTECTION SHOULD BE ACCOMPLISHED BY INSTALLING LANDLOK S2 EROSION CONTROL BLANKET ATOP THE SEED LAYER. LANDLOK S2 IS TO BE SECURED USING 6" U-SHAPED STAPLES WITH A FREQUENCY OF 2.0 STAPLES PER SQUARE METER (1.7 STAPLES PER SQUARE YARD).
10. IRRIGATE TO ESTABLISH AND MAINTAIN VEGETATION. FREQUENT, LIGHT IRRIGATION WILL NEED TO BE APPLIED TO SEEDED AREAS IF NATURAL RAIN EVENTS HAVE NOT OCCURRED WITHIN TWO WEEKS OF SEEDING. WHEN WATERING SEEDED AREAS, USE A FINE SPRAY TO PREVENT EROSION OF SEEDS OR SOIL. DO NOT OVER IRRIGATE.
11. SEE LANDSCAPING PLANS FOR PLANTING MATERIALS INSIDE SCOURLOCK UNITS.
12. LEVELING COURSE MATERIAL TO BE GRANULAR AND LARGER THAN NO. 4 US SIEVE AND BE A UNIT WEIGHT OF 130 LB/FT^3, PER FDOT STANDARD SPECIFICATIONS.

THE UPPER ROWS OF SCOURLOK ARE SPECIFIED TO BE FILLED WITH APPROVED EXCAVATED ONSITE MATERIAL. THE SCOURLOK FILL MATERIAL SHALL VARY DEPENDING ON PROJECT SPECIFIC DESIGN PER SPECIFIC DETAILS. FILL SHALL BE FREE OF LARGE ROCKS, BOULDERS, SOIL CLODS, VEGETATION, AND OTHER SHARP OBJECTS.
14. FILL MATERIAL PLACED INSIDE UPPER ROW OF SCOURLOK AND BEHIND SCOURLOK TO BE ONSITE SOILS COMPACTED TO A MINIMUM OF 90% STANDARD PROCTOR AND FREE OF ORGANIC MATERIAL.
15. SCOURLOK POCKETS TO CONTAIN PLANTINGS SHALL BE FILLED WITH A GROWTH MEDIUM (SOIL, MULCH, ETC.) AND NOTED PLANTINGS.

GENERAL NOTES:

LIVE LOAD: HL-93.

CONSTRUCTION LOADING: It is the construction Contractor's responsibility to provide for supporting construction loads that exceed AASHTO HL-93, and any construction load applied prior to 2 feet of compacted fill placed above the top slab.

SURFACE FINISH: All concrete surfaces shall receive a general surface finish.

SKEWED CONSTRUCTION JOINTS: Construction joints in barrels of culverts with skewed wingwalls may be placed parallel to the headwalls and the reinforcing steel, and the slabs may be cut provided that the cut reinforcing steel extends beyond the construction joint enough for splices to be made in accordance with Table 1 on this sheet. The cost of construction joints and additional reinforcing shall be at the expense of the Contractor.

CULVERT EXTENSIONS: For cut backs and ties into existing concrete box culverts see Sheet 6 of 8.

REINFORCING STEEL: See the "Box Culvert Data Tables" in the Contract Plans for grade and bar spacing. See the Reinforcing Bar List in the Contract Plans for bar sizes and bar bending details.

NOTES:
1. For small angles, the Contractor may elect to fill the area between the box and the wingwall footing with unreinforced concrete. For wingwall skew angles less then 90 degrees, field bend wingwall reinforcement as necessary while maintaining cover. No additional payment will be made for this work.
2. Location of Construction Joint determined by WP at theoretical intersection of:
   – Soil side face of Headwall and outside face of Box Exterior Wall, for SW=90°;
   – Outside face of Wingwall and outside face of Box Exterior Wall, for SW>90°.
3. Provide 6" chamfer when angle 'A' is greater than 45°. Maintain minimum wall thickness. Field adjust reinforcing to maintain cover.
4. Wingwall Skew Angles (SW) are measured from the adjacent box exterior wall to the wingwall.
5. Turn or extend Wingwall Cutoff Wall as necessary to meet Box Cutoff Wall.
6. Provide additional reinforcement in the top of the top slab below traffic railings to ensure a minimum area of 0.80 sq. in./ft. transverse reinforcing.

   Concrete (Cast-In-Place):
   Class II (3,400 psi) for slightly aggressive environments.
   Class IV (5,500 psi) for moderately to extremely aggressive environments.
   Reinforcing Steel:
   Maintain minimum clearance of 2" for slightly and moderately aggressive environments or 3" for extremely aggressive environments, unless otherwise shown. Equal area substitution of welded wire (WWR) reinforcement is permitted.
2. Work this Index with the Cast-In-Place Concrete Box Culvert Details and Data Tables shown in the plans, Index 400-289 and the Precast Concrete Box Culverts shown in the shop drawings.

2. For Precast Sections construct opening a minimum of 1'-6" away from any box to box joint, except opening may be a minimum of 1'-0" away from joint when at least 2'-0" of clearance to the box to box joint is provided on the opposite side of the pipe opening.
3. Pipe blockout diameter to be 6" greater than pipe outside diameter.
4. See Drainage Plans for size, placement, and invert elevation.

LINK SLAB TYPICAL SECTION
(Multiple Barrel Culvert shown, Single Barrel Culvert similar)

* Install dowels with an Adhesive Bonding Material System in accordance with Specification Section 416. The Contractor may substitute mechanical couplers in lieu of adhesive bonded dowels. Shift dowels to clear box culvert reinforcing.

LINK SLAB NOTES:

1. Provide a Cast-In-Place Link Slab to ensure uniform joint opening of precast box culverts when the differential settlement shown in the plans exceeds the following limits, except that a Link Slab is not required for differential settlements less than ½".

$$\Delta Y \leq \frac{(L)^2}{760 \times R \times W}$$

Where:
ΔY = Maximum Long-Term Differential Settlement (ft.)
R = Exterior height of Box Culvert (ft.)
W = Length of Box Culvert Segments (ft.)
L = Effective length for single curvature deflection (ft.)

2. Extend Link Slab to back face of headwalls and to limits of existing box culverts for extensions.

STEEL GRATES

NOTE: Steel Grates Are Required On Inlets With Traversable Slots And On Inlets where Bicycle Traffic Is Anticipated.

GENERAL NOTES

1. These inlets are suitable for bicycle traffic and are to be used in ditches, medians and other areas subject to infrequent traffic loadings but are not to be placed in areas subject to any heavy wheel loads. These inlets may be placed in areas subject to occasional pedestrian traffic such as landscaped areas and pavement areas where pedestrians can walk around the inlet.
2. Inlets subject to minimal debris should be constructed without slots. Where debris is a problem inlets should be constructed with slots. Slotted inlets located within roadway clear zones and areas subject to pedestrians shall have traversable slots. The traversable slot modification is not adaptable to Inlet Type H. Slots may be constructed at either or both ends as shown on plans. Traversable slots shall not be used in areas subject to occasional bicycle traffic.
3. Steel grates are to be used on all inlets where bicycle traffic is anticipated. Steel grates are to be used on all inlets with traversable slots. Either cast iron or steel grates may be used on inlets without slots where bicycle traffic is not anticipated. Either cast iron or steel grates may be used on all inlets with non-traversable slots. Subject to the selection described above, when Alternate G grate is specified in the plans, either the steel grate, hot dip galvanized after fabrication, or the cast iron grate may be used, unless the plans stipulate the particular type.
4. Recommended maximum pipe sizes shown are for concrete pipe. Size for other types of pipe must be checked for fit.
5. All exposed edges and corners shall be ¾" chamfer or tooled to ½" radius.
6. Concrete inlet pavement to be used on inlets without slots and inlets with non-traversable slots only when called for in the plans; but required on all traversable slot inlets. Cost to be included in contract unit price for inlets. Quantities shown are for information only.
7. Traversable slots constructed in existing inlets shall be paid for as inlets partial. For conversion work and method of payment see 'TRAVERSABLE SLOT INLETS (PARTIAL) FOR EXISTING INLETS'.
8. Sodding to be used on all inlets not located in paved areas and paid for under contract unit price for Performance Turf, SY.
9. For supplementary details see Index 425-001.
10. All reinforcing is Grade 60 bars with 2" min. cover unless otherwise noted. Bars to be cut or bent for 1½" clearance around pipe opening. Provide one additional #4 bar above and at each side of pipe opening.

TRAVERSABLE SLOT INLETS (PARTIAL) FOR EXISTING INLETS

DESIGN NOTES FOR TRAVERSABLE SLOT INLETS (PARTIAL) FOR EXISTING INLETS

1. The general purpose of these conversions is to remove the hazard of the protruding inlet top, while not creating a hazard by depressing the top too deeply.

2. The corrective procedure depends on the approach ditch grade and hydraulic requirements of the site. The selection of the appropriate case depends on the relationship between inlet top and ditch elevation, and, on the vertical clearance between the top of the uppermost pipe(s) and the grate. The purpose for the Case 1 conversion is to add the traversable slot to an existing inlet where top removal, change in grate elevation and ditch transitions are not required. Case 2 will normally be applicable to ditches with flatter grades adjoining the inlet. Case 3 will normally be applicable to ditches with steeper grades adjoining the inlet where build up of the existing ditch is acceptable.

3. The designer shall stipulate in the plans which case is to be constructed at each individual inlet location.

   Where the existing inlet top is above the existing ditch (Case 2) but borrow material will be required to adjust the ditch (Case 3), and vertical clearance or other conditions do not prevent removal of the inlet top, the designer should call for Case 2. The designer shall determine if ditch reconstruction is required more than 35 feet beyond any traversable slot side and shall include separate pay items in the plans to cover the cost for that portion of required ditch reconstruction exceeding the 35 foot limit. The designer shall also determine whether ditch pavement is required for ditch restoration within the 35 foot limit and include that pavement under a pay item separate from the inlets partial.

   When the detention ditch concept is to be used with Case 3, the designer shall stipulate 'Case 3 (Detention)' in the plans.

   The designer shall determine whether tight soil or other conditions at each individual inlet indicates the need for underdrain in Case 3 conversions and shall call for Underdrain, Type I in the plans.

METHOD OF PAYMENT FOR TRAVERSABLE SLOT INLETS (PARTIAL) FOR EXISTING INLETS

1. Existing inlets converted to traversable slot tops under Cases 1, 2 and 3 shall be paid for as inlets partial, each. Case shall not be included in the pay item description.

2. All ditch reconstruction work within 35 feet of each traversable slot conversion, whether required by these details or as a direct result of the conversion, shall be included as a part of the partial cost. Reconstruction work shall include excavation and removal of surplus materials or borrow materials in place, grading, compaction, shaping and restoration of disturbed turf. Sodding, ditch pavement and underdrain are not included as part of the inlet partial cost and are to be paid for separately.

3. Concrete inlet pavement and sodding shall be in accordance with the sections on this detail and with the Plan on Sheet 4 and Sections AA, BB and CC (as Case 1) and tabular quantities on Sheet 5.

4. Unit price and payment shall constitute full compensation for inlet conversion (including concrete inlet paving and replacement grate(s)), ditch reconstruction, restoration of disturbed turf, and shall be paid for under the contract price for Inlets (DT Bot) (Type __) (Partial), each.

   Sodding shall be paid for under the contract unit price for Performance Turf, SY.

   Ditch pavement shall be paid for separate from the inlet by pavement type(s) and unit(s) as called for in the plans.

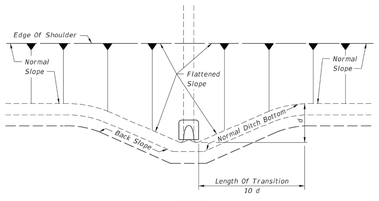
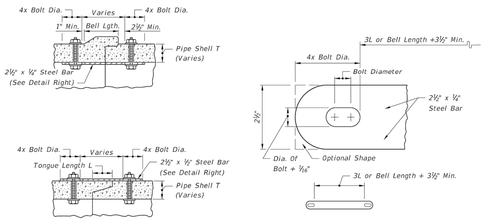
CROSS DRAIN MITERED END SECTION



PLAN

NOTE: See General Note 4

SLOPE AND DITCH TRANSITIONS



All bars, bolts, nuts and washers are to be galvanized steel.
Bolt diameters shall be ⅜" for 15" to 36" pipe and ½" for 42" to 72" pipe.
Two connectors required per joint, located 60° right and left of bottom center of pipe.
Bolt holes in pipe shell are to be drilled.

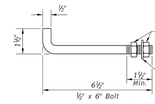
CONCRETE PIPE CONNECTOR

GENERAL NOTES

1. Unless otherwise designated in the plans, concrete pipe mitered end sections may be used with any type of cross drain pipe; corrugated steel pipe mitered end sections may be used with any type of cross drain pipe except steel pipe. When bituminous coated metal pipe is specified for cross drain pipe, construct the mitered end sections with like pipe or concrete pipe. When the mitered end section pipe is dissimilar to the cross drain pipe, construct a concrete jacket in accordance with Index 430-001.
2. Use either corrugated metal or concrete mitered end sections for corrugated polyethylene pipe (HDPE), polyvinyl-chloride pipe (PVC) and polypropylene pipe (PPP). When used in conjunction with corrugated mitered end sections, make connection using either a formed metal band specifically designated to join HDPE or PVC pipe, with metal pipe or other coupler approved by the State Drainage Engineer. When used in conjunction with a concrete mitered end sections, concrete jacket constructed in accordance with Index 430-001.
3. Class NS concrete cast-in-place reinforced slabs are required for all sizes of cross drain pipes. Unless 3" thickness called for in plans, construct slabs at 5½" thick.
4. Select lengths of concrete pipe that avoid excessive connections in the assembly of the mitered end section.
5. Repair corrugated metal pipe galvanizing that is damaged during beveling and perforating.
6. Prior to placing concrete slab apply a bituminous coating to any portion of corrugated metal pipe in direct contact with concrete. Extend the coating 12" beyond the concrete slab.
7. When existing multiple cross drain pipes are spaced other than the dimensions shown in this Index, have nonparallel axes, or non-uniform sections, either construct the mitered end sections separately as single pipe or collectively as multiple pipe end sections as directed by the Engineer.

DESIGN NOTES

1. Mitered end sections for pipe sizes 15", 18" and 24" round or equivalent pipe arch or elliptical pipe are permitted within the clear zone. When the slope intersection permits, the mitered end section may be located with the culvert opening as close as 8' beyond the outside edge of the shoulder.
2. Include slope and ditch transitions when the normal roadway slope must be flattened to place end section outside clear zone. See Slope and Ditch Transitions detail.



Anchors required for CMP only.

Anchor, washer and nuts to be galvanized steel.

Bend anchor where required to center in concrete slab. Damaged surfaces to be repaired after bending. Anchors are to be spaced a distance equal to four (4) corrugations. Place the anchors in the outside crest of corrugation.

Flat washers to be placed on inside wall of pipe.

Holes in the mitered end pipe are to be drilled or punched; burning not permitted.

PERMISSIBLE PAVEMENT MODIFICATION

GENERAL NOTES

1. Unless otherwise designated in the plans, concrete pipe mitered end sections may be used with any type of side drain pipe; corrugated steel pipe mitered end sections may be used with any type of side drain pipe except aluminum pipe; and, corrugated aluminum mitered end sections may be used with any type of side drain pipe except steel pipe. When bituminous coated metal pipe is specified for side drain pipe, construct the mitered end sections with like pipe or concrete pipe. When the mitered end section pipe is dissimilar to the side drain pipe, construct a concrete jacket in accordance with Index 430-001.
2. Use either corrugated metal or concrete mitered end sections for corrugated polyethylene pipe (HDPE), polyvinyl-chloride pipe (PVC) and polypropylene pipe (PPP). When used in conjunction with corrugated mitered end sections, make connection using either a formed metal band specifically designated to join HDPE or PVC pipe, with metal pipe or other coupler approved by the State Drainage Engineer. When used in conjunction with a concrete mitered end sections, concrete jacket constructed in accordance with Index 430-001.
3. Select lengths of concrete pipe that avoid excessive connections in the assembly of the mitered end section.
4. Repair corrugated metal pipe galvanizing that is damaged during beveling and perforating.
5. Prior to placing concrete slab apply a bituminous coating to any portion of corrugated metal pipe in direct contact with concrete. Extend the coating 12" beyond the concrete slab.
6. When existing multiple side drain pipes are spaced other than the dimensions shown in this Index, have nonparallel axes, or non-uniform sections, either construct the mitered end sections separately as single pipe or collectively as multiple pipe end sections as directed by the Engineer.
7. Class NS concrete cast-in-place reinforced slabs are required for all sizes of side drain pipes.
8. Install grates on all round pipes 30" or greater, pipe-arches 35"x24" or greater, and elliptical pipe 19"x30" or greater, unless excluded in the Plans. Install grates on smaller size pipes only when called for in the Plans. Omit the lower grate on the downstream end of mitered end sections along divided highways.
9. Use Schedule 80 pipe for the lower grate on all traffic approach ends and Schedule 40 pipe for all remaining grates. Fabricate the grates from ASTM A53, Grade B, black steel pipe and hot dip galvanize after fabrication in accordance with ASTM A123 for all corrosive environments.

DESIGN NOTES

1. Do not use grates until the debris transport potential has been evaluated by the drainage engineer and appropriate adjustments made. Ditch grades in excess of 3% or pipe with less than 1.5' of cover and grades in excess of 1% will require such an evaluation (General Note 10).
2. The design engineer must determine and designate in the plans which alternate types of mitered end section will not be permitted. Restrict use based on corrosive or structural requirements.
3. Contact the District Drainage Engineer for possible alternate treatment of side drain mitered end sections where a minimum spacing of 30' will not result between the toe points of the mitered end sections.
4. Provide ditch transitions on all grades in excess of 3%.

ORIGINAL SHEET - ANSI D

GENERAL NOTES:

1. *INSTALLATION:* Construct guardrail in accordance with Specification 536.

   This Index, along with the plans and the manufacturers' drawings on the Approved Products List (APL), is sufficiently detailed for installation of General Guardrail, Low-Speed Guardrail, End Treatment assemblies, and their connecting options shown herein. This precludes requirements for shop drawing submittals unless otherwise specified in the plans.

2. *COMPATIBILITY:* The General Guardrail in this Index is based on the Midwest Guardrail System (MGS) design, with an approximate height of 31" at the top of the Panel (2'-1" mounting height at vertical ℄ of Panel) and a midspan panel splice as shown on Sheet 2. Guardrail components included on the APL, which are compatible with this Index, may also be identified as 31" or MGS Guardrail.

3. *STANDARD COMPONENTS:* Standard guardrail components, including posts, panels, and bolt systems, are based upon English unit conversions of the AASHTO-AGC-ARTBA Joint Committee Task Force 13 Report: A Guide to Standardized Highway Barrier Hardware (http://www.aashtotf13.org/Barrier-Hardware.php).

4. *BUTTON-HEAD BOLTS:* Install Button-Head Bolts where indicated using bolts, nuts, and washers as defined on Sheet 22. Place washers under nuts. Do not place washers between bolt heads and panels, except where otherwise shown in this Index.

5. *HEX-HEAD BOLTS:* Install Hex-Head Bolts where indicated using bolts, nuts, and washers in accordance with material properties of Specification 967. Place washers under nuts.

6. *MISCELLANEOUS ASPHALT PAVEMENT:* Install Miscellaneous Asphalt Pavement where indicated with a tolerance of ± ½" depth and in accordance with Specification 339.

7. *ADJACENT SIDEWALKS & SHARED USE PATHS:* When guardrail posts are placed within 4'-0" of a sidewalk or shared use path, use timber posts, or use steel posts only if treated with Pipe Rail as shown on Sheet 20.

   When timber posts are used, one of the following safety treatments is required for the bolt(s) protruding from the back face of the posts:

   a. After tightening the nut, trim the protruding post bolt flush with the nut and galvanize per Specification 562.
   b. Use post bolts 15" in length and countersink the washer and nut between 1" and 1½" deep into the back face of the post.
   c. Use 13" post bolts with sleeve nuts and washers.

   When End Treatment posts are within 4'-0" of a sidewalk or shared use path, steel posts are not permitted within the End Treatment segment. Terminate the Pipe Rail outside of End Treatment segments, as noted per Sheet 20.

8. *NESTED W-BEAM:* Where called for in the plans, install two W-Beam Panels mounted flush per location, securing all panels with Button-Head Bolts threaded through aligned slots and holes. 2" Button-Head Bolts are permitted for panel splice locations.

9. *CONNECTION TO RIGID BARRIER:* The connections to Rigid Barrier in this Index only apply to newly constructed bridge Traffic Railing and Concrete Barrier or where the complete Approach Transition Connection to Rigid Barrier shown herein can be installed without conflicting with existing Traffic Railings, structures, or approach slabs.

   For connecting guardrail to existing bridge Traffic Railings, see the layouts and details of Indexes 536-002, 521-404, and 421-405.

10. *CONNECTION TO EXISTING GUARDRAIL:* Where a transition to existing guardrail at 27" height is required, linearly transition the guardrail height over a distance ranging from 25'-0" to 31'-3". Provide an immediate transition to the required midspan splice using the available panel options on Sheet 4 (9'-4½" or 15'-7½" panel).

11. *PLANS CALLOUTS:* Begin/End Station labels are shown throughout this Index as they correspond to the station and offset callouts specified in the plans.

    In the plans, Begin/End Guardrail Station refers to the General TL-3 Guardrail Pay Item, and it may be abbreviated as Begin/End GR. Station. Where the Low-Speed TL-2 Guardrail Pay Item is specifically required, the callout in the plans will then specify Begin/End TL-2 GR. Station.

12. *QUANTITY MEASUREMENT:* Measure guardrail and corresponding components as defined in Specification 536. The Guardrail length is measured along the centerline of installed Panels, between the points labeled Begin/End Guardrail Station shown on the following Index Sheets and defined in the plans (typically measured from the ℄ of the panel's post bolt slots at the approach/trailing ends).

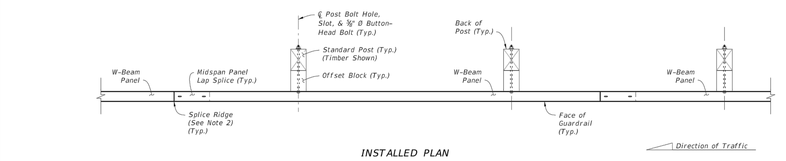
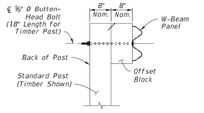
GENERAL GUARDRAIL INSTALLED ELEVATION



GENERAL GUARDRAIL INSTALLED PLAN



INSTALLED SECTION

NOTES:

1. *GENERAL:* Install the General Guardrail configuration where indicated in the plans. This may include tapered segments if called for in the plans.

   Use 12'-6" or longer W-Beam Panels. A single 6'-3" Panel may be used at the end of the run to meet the nominal Begin/End Guardrail Sta. requirements.

   Where a differing guardrail configuration is required for constructability beyond the options shown in this Index or the plans, obtain approval from the Engineer prior to installation.

2. *MIDSPAN PANEL LAP SPLICE:* For proper structural function, place all Lap Splices at midspan unless otherwise indicated.

   Lap the Panels with the Splice Ridge oriented downstream of the final Direction of Traffic in the nearest traffic lane. For reverse lane conditions, orient the Splice Ridge downstream of the lane direction with the highest traffic volume. Orienting Lap Splices for Temporary Traffic Control phasing is not required.

3. *CONNECTION DETAILS:* Connections to End Treatments, Approach Transitions, or other segment types are defined in the following Index Sheets, APL Drawings, or the plans.

4. *W-BEAM PANEL DETAILS:* See Sheet 4.

5. *POST & OFFSET BLOCK DETAILS:* See Sheet 5.

6. *GUARDRAIL SECTIONS:* For Sections showing typical mounting heights, grading, and lateral offsets in relation to adjacent roadway features, see Sheet 6.

7. *MODIFIED MOUNTS:* Where concrete structures, concrete sidewalk, or shallow depth conditions are encountered, see Sheet 21 for additional post mounting options.

8. *DEFINED SEGMENTS:* The General Guardrail shown provides the base configuration, including Post Spacing and splice locations, for Defined Segment modifications where indicated in the plans and using the Guardrail Types, Sections, and/or hardware as shown in this Index (e.g. Double Faced W-Beam, Modified Thrie-Beam, Deep Posts at Slope Breaks, Pipe Rail, Rub Rail, or Reduced Post Spacing for Hazards).

   Where a differing guardrail configuration is required for constructability beyond the options shown in this Index or the Plans, obtain approval from the Engineer prior to installation.

2. *MIDSPAN PANEL LAP SPLICE:* For proper structural function, place all Lap Splices at midspan unless otherwise indicated.

   Lap the Panels with the Splice Ridge oriented downstream of the final Direction of Traffic in the nearest traffic lane. For reverse lane conditions, orient the Splice Ridge downstream of the lane direction with the highest traffic volume. Orienting Lap Splices for Temporary Traffic Control phasing is not required.

NOTES:

1. STANDARD POSTS: Where Standard Posts are called for in this Index, use either a Timber Post or Steel Post at the Length, 'L', shown for Standard Posts. Use a single post material type consistently per each run of guardrail. Only where specified in the Plans, use the Deep Post 'L' for Slope Break Conditions as shown on Sheet 6.
2. OFFSET BLOCKS: For each Panel type, install the corresponding Offset Block type as shown. For General, TL-3 (Single Faced) Approach Transitions only, use the 1'-0" Thrie-Beam Block (See Sheet 13).
3. BOLT HOLES: 13/16" Ø Bolt Holes shown in posts within this Index may be substituted with 7/8" Ø Bolt Holes.
4. DOUBLE FACED GUARDRAIL: Orient Post Bolts with the Button-Head located on the side nearest the traffic lane. The bolt's threaded portion is not permitted to extend beyond ½" from the face of the tightened nut; trim the threaded portion as needed and galvanize in accordance with Specification 562.
5. MODIFIED THRIE-BEAM NESTED BACK-UP PLATE: At each post connection, install a Nested Back-up Plate between the Thrie-Beam Panel and the post. The Nested Back-up Plate has a cross-section and material matching the Thrie-Beam Panel Section.
6. BLOCK STOP-NAIL: Drive one nail per Standard Offset Block as shown to prevent Block rotation. Use steel 3½" Type 16d nails with ASTM A153 hot-dip galvanization. For steel posts, drive the nail through the unused Flange Bolt Hole and bend the nail so it's head contacts the flange.
7. MATERIALS: Use timber and steel posts and offset blocks in accordance with Specification 967. Composite offset blocks may be substituted as approved on the APL. Use a single offset block type consistently per each run of guardrail. Steel offset blocks are only permitted for Modified Thrie Beam.

NOTES:

1. INSTALLATION: Locate Approach Terminals where called for in the plans, with the Post (1) ℄ placed at the Begin/End Guardrail Station indicated in the plans.

   The Plan Views shown herein are schematic only, showing basic geometry for Approach Terminals listed on the APL. The predefined Length of End Treatment, 'LE', includes the proprietary portion of various Approach Terminals and provides for more consistent planning of assembly installations across the differing Approach Terminal types. Forward-anchoring style Approach Terminals may vary from the planned lengths shown by up to 3'-0".

   Construct Approach Terminals as shown in the APL and in accordance with the manufacturer's unique drawing details, procedures, and specifications.

   Install posts in accordance with the manufacturer's drawings. The Special Posts on Sheet 21, including Special Steel Posts, Encased Posts, and Frangible Leave-Outs, are not permitted within the Approach Terminal segment unless otherwise called for in the plans.

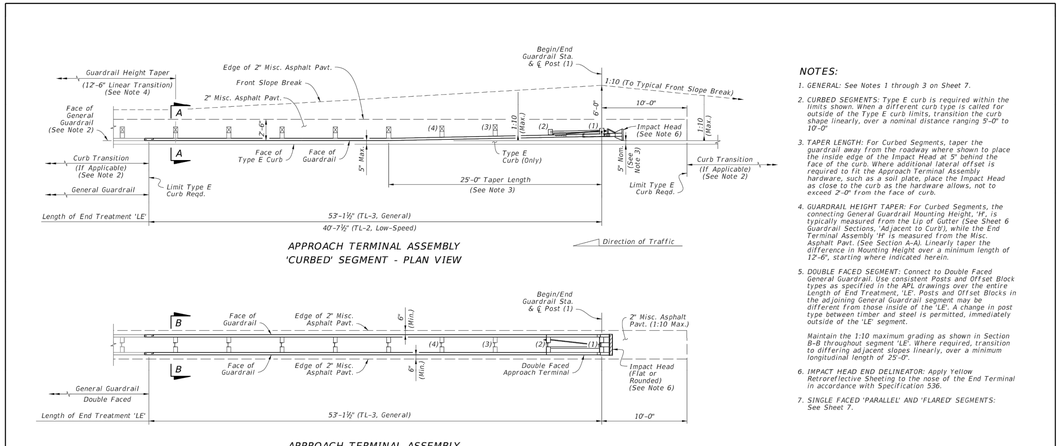
   Align panel lap splices in accordance with the manufacturer's drawings, regardless of the direction of traffic.

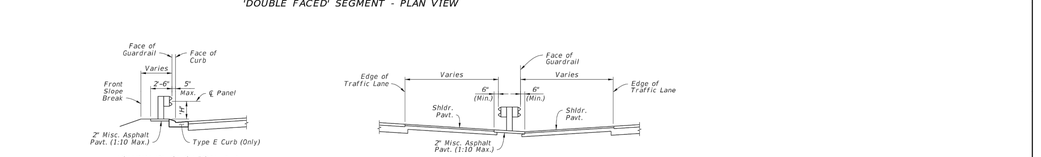
   Install adjacent grading, gutters, and/or curbing as shown herein, unless otherwise specified in the plans.
2. GENERAL GUARDRAIL: General Guardrail typically includes Panels and Post Spacing as shown on Sheet 2, including parallel and tapered segments.

   Approach Transitions, Low-Speed Guardrail, or Reduced Post Spacing Guardrail segments may be substituted for the General Guardrail shown herein if indicated in the plans.
3. APPROACH TERMINAL TEST LEVEL: Install either a Test Level 3 (TL-3) or Test Level 2 (TL-2) Approach Terminal as specified in the plans. TL-3 Approach Terminals may substitute for TL-2 Approach Terminals unless the substitution is specifically prohibited in the plans. TL-2 Approach Terminals may not substitute for TL-3 installations.
4. IMPACT HEAD END DELINEATOR: Apply Yellow Retroreflective Sheeting to the nose of the End Terminal in accordance with Specification 536.
5. 2" MISCELLANEOUS ASPHALT PAVEMENT: The Plan Views shown herein depict the Unpaved Shoulder condition. For Fully Paved Shoulder and Shoulder Gutter conditions, extend the 2" Misc. Asphalt Pavement as shown in the corresponding 'Section at Post (1)' details below.
6. 'CURBED' AND 'DOUBLE FACED' GUARDRAIL SEGMENTS: See Sheet 8.

END TREATMENT - APPROACH TERMINAL GEOMETRY PARALLEL AND FLARED

LAST REVISION 11/01/17	REVISION	DESCRIPTION:	FDOT FY 2019-20 STANDARD PLANS	GUARDRAIL	INDEX 536-001	SHEET 7 of 22





NOTES:

1. GENERAL: See Notes 1 through 3 on Sheet 7.
2. CURBED SEGMENTS: Type E curb is required within the limits shown. When a different curb type is called for outside of the Type E curb limits, transition the curb shape linearly, over a nominal distance ranging 5'-0" to 10'-0".
3. TAPER LENGTH: For Curbed Segments, taper the guardrail away from the roadway where shown to place the inside edge of the Impact Head at 5" behind the face of the curb. Where additional lateral offset is required to fit the Approach Terminal Assembly hardware, such as a soil plate, place the Impact Head as close to the curb as the hardware allows, not to exceed 2'-0" from the face of curb.
4. GUARDRAIL HEIGHT TAPER: For Curbed Segments, the connecting General Guardrail Mounting Height, 'H', is typically measured from the Lip of Gutter (See Sheet 6 Guardrail Sections, 'Adjacent to Curb'), while the End Terminal Assembly 'H' is measured from the Misc. Asphalt Pavt. (See Section A-A). Linearly taper the difference in Mounting Height over a minimum length of 12'-6", starting where indicated herein.
5. DOUBLE FACED SEGMENT: Connect to Double Faced General Guardrail. Use consistent Posts and Offset Block types as specified in the APL drawings over the entire Length of End Treatment, 'LE'. Posts and Offset Blocks in the adjoining General Guardrail segment may be different from those inside of the 'LE'. A change in post type between timber and steel is permitted, immediately outside of the 'LE' segment.

   Maintain the 1:10 maximum grading as shown in Section B-B throughout segment 'LE', Where required, transition to differing adjacent slopes linearly, over a minimum longitudinal length of 25'-0".
6. IMPACT HEAD END DELINEATOR: Apply Yellow Retroreflective Sheeting to the nose of the End Terminal in accordance with Specification 536.
7. SINGLE FACED 'PARALLEL' AND 'FLARED' SEGMENTS: See Sheet 7.

TL-3 APPROACH TRANSITION
INSTALLED PLAN

NOTES:

1. *INSTALLATION:* Construct the Approach Transition segment where indicated in the plans. The required offset of the connecting adjacent guardrail is shown in the plans.

   The Layouts given on Sheet 17 provide basic schemes for connections to adjacent guardrail, where a taper to a differing guardrail offset may be required. If the adjacent guardrail segment has the same offset as the Approach Transition segment, then no taper is required.

   For existing bridge connection options, see Indexes 536-002, 521-404, and 521-405.

2. *SECTION VIEWS & DETAILS:* For cross sections and details including the barrier mounting hardware, curb transition, adjacent grading, and installation dimensions, see Sheet 15.

3. *END TRANSITION OF CURB OPTION:* The Plan and Elevation views depict an example Curb Transition to Shoulder Gutter from Section D-D to E-E, but this transition may require a different shape depending on the End Transition option indicated in the plans (Either a 'Shoulder Gutter Option', 'Raised Curb Option', or 'Flat No Curb Option'). See Sheet 15 for curb shape details.

4. *RIGID BARRIER END TRANSITION:* Taper the Rigid Barrier toe as shown. See Concrete Barrier, Index 521-001, and Traffic Railing, Indexes 521-422 and 521-428, for details.

5. *OFFSET BLOCKS:* For Thrie-Beam post locations within the Length of Approach Transition segment, use the Timber Offset Blocks with 1'-6" height shown on Sheet 5.

   For the midspan of the Thrie-Beam Transition Panel and for all other W-Beam locations shown herein, use the W-Beam Offset Blocks with 1'-2" height.

6. *OFFSET:* The required offset difference between the Face of Guardrail and Rigid Barrier Shoulder Line is considered negligible and may not be shown in the guardrail offset callouts in the plans. A consistent guardrail offset deviation of up to 4 inches outside of the Rigid Barrier Shoulder Line is permitted over the length 'LA'.

7. *GENERAL GUARDRAIL:* General Guardrail typically includes Panels and Post Spacing as shown on Sheet 2, including parallel and tapered segments. Approach Terminals, Low-Speed Guardrail, or Reduced Post Spacing Guardrail segments may be substituted for the General Guardrail shown herein if indicated in the plans.

NOTES:

1. *INSTALLATION: The Plan Views shown are schematic only, showing example geometry for connecting guardrail segments including taper locations and Double Faced Guardrail requirements as applicable. Work this Sheet with the plans, where stationing and offsets for Begin/End Guardrail, Begin/End Rigid Barrier, and Begin/End Taper are specified. For existing bridge layouts, see Index 536-002, 521-404, and 521-405.*
2. *GENERAL (OR LOW-SPEED) GUARDRAIL SEGMENT: Construct this segment if shown in the plans. For the case where this segment's offset differs from the Approach Transition offset, linearly taper the guardrail between the Begin/End Taper Stations and offsets as specified in the plans.*

   For the shortest length case of a direct connection between the End Treatment and the Approach Transition, this segment may be omitted as shown in the plans.
3. *LENGTH OF APPROACH TRANSITION 'LA': Install the Approach Transition as shown per Sheet 13 or 14 as called for in the plans.*
4. *LENGTH OF END TREATMENT 'LE': Install the Approach Terminal End Treatment as shown per Sheet 7 or 8, where called for in the plans. Use the corresponding APL drawings for construction details.*
5. *CROSSOVER GUARDRAIL (FOR TYPE B APPROACH): Install the Crossover Segment tapering linearly from the Begin Taper Sta. and offset to the End Taper Sta. and offset as specified in the plans.*
6. *LENGTH OF DOUBLE FACED GUARDRAIL PANELS, 'LD' (FOR TYPE B APPROACH): Terminate the Double Faced Guardrail panels as shown (based upon the 30" line measured from the hazard on the opposite side of the median). Extend the panel segment longer than the dimension 'LD' as needed for the Panel's end Bolt Slot to align with a post Bolt hole.*

   Install a Flared End Unit where shown, as defined on Sheet 9.
7. *END TREATMENT OPTIONS (FOR TYPE B & C APPROACH): For Double Faced applications, use either a Double Faced Approach Terminal Assembly per Sheet 8 or a Crash Cushion per Index 544-001. For either Option, meet the 1:10 adjacent grading requirements for Approach Terminals as shown on Sheet 8.*
8. *SLOPE GUARD: Where indicated in the plans, install a Guardrail segment between bridge approaches and offset from the bridge abutment's Slope Break as shown. Install posts at the end bolt slots of the panel system. Use post spacing of either 3'-1½" or 6'-3", as needed to correctly fit system between barriers. The system may also be lengthened to fit by installing two Rounded End Units as defined on Sheet 9.*

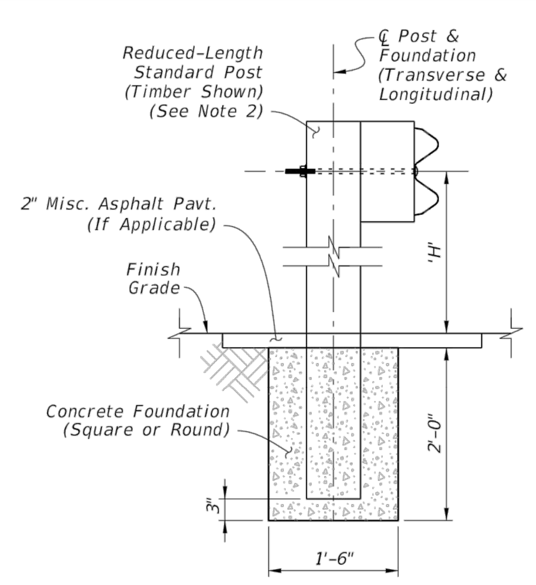
ISOMETRIC VIEW — ELEVATION — SPECIAL STEEL POST

INSTALLED SECTION (Option 2, Special Post) — INSTALLED PLAN EXAMPLE (Curb Inlet Top Type 2 Shown) — STRUCTURE MOUNTING

NOTES:

1. INSTALLATION: When the construction of Guardrail at the required post spacing results in post(s) located atop culverts, inlets, pier footings, or similar concrete structures, a Special Steel Post may be substituted for a Standard Post. Install where shown in the plans and/or as-needed, in accordance with Specification 536.
2. EDGE CONFLICT: When a required post location causes an Edge Conflict with the structure, where the Steel Base Plate is not located entirely on the structure at least 3" from the Edge of Concrete, the longitudinal post location may be altered by up to 1'-6¾" (Quarter Span) from the original required spacing location to prevent the Edge Conflict. With the post location adjusted, use a Std. Post mounted in soil (Option 1) or a Special Steel Post with its Base Plate mounted entirely on the structure (Option 2). Maintain the original required spacing locations upstream and downstream of the structure.
3. BASE PLATE MOUNT: Install Special Steel Posts as shown using steel Adhesive-Bonded Anchor Bolts in accordance with Specifications 536. Use ¾" Hex-Head Bolts for structures less than 9" deep as defined in the Specification.
4. PANEL MOUNT TO ADJUSTED POST: Punch additional ¾"x2½" Post Bolt Slot(s) in the W-Beam or Thrie-Beam Panel only where needed to mount the panel to a post in an adjusted location. Meet the Panel Post Bolt Slots requirements of Specification 536.
5. MATERIALS: Use steel base plates in accordance with Specification 536.

SPECIAL STEEL POST FOR CONCRETE STRUCTURE MOUNT

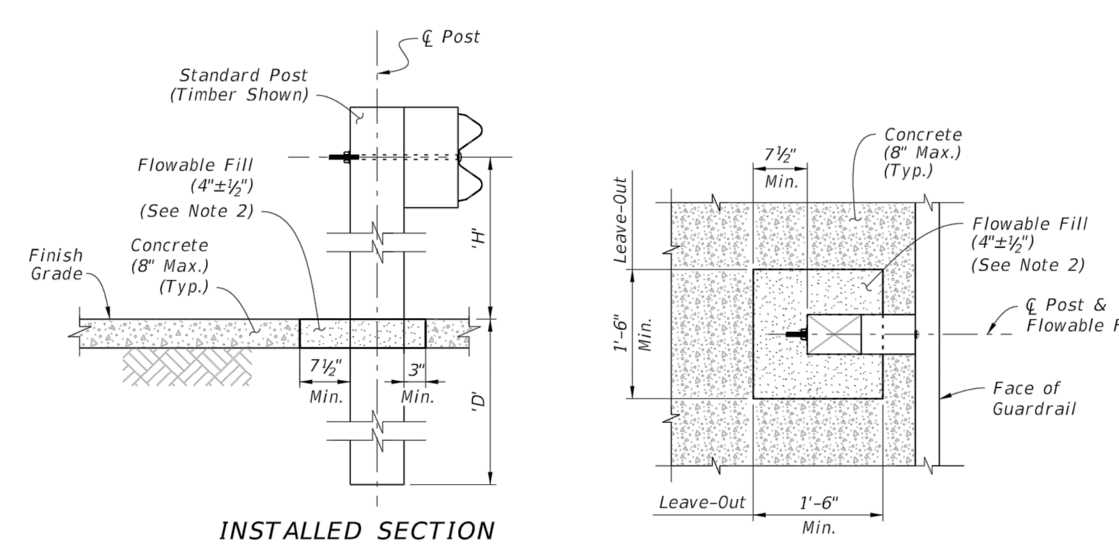


INSTALLED SECTION

NOTES:

1. INSTALLATION: When the construction of Guardrail at the required post spacing results in post(s) conflicting with underground utilities or other underground obstructions, an Encased Post may be used where a 2'-0" depth will avoid the conflict. Install where shown in the plans and/or as-needed, in accordance with Specification 536.
2. REDUCED-LENGTH STANDARD POST: Use a Standard Post with reduced Length such that the Panel Height 'H' is maintained while the post bottom terminates 3" from the bottom of the Concrete Foundation. Typically, the Post Length 'L' is 4'-7" for W-Beam Guardrail.
3. FOUNDATION: Use non-reinforced Class NS Concrete material in accordance with Specification 347. After casting the concrete, ensure the surrounding soil material is completely backfilled and tamped to provide full passive resistance.
4. LIMIT: Encased Posts are not permitted for consecutive posts unless otherwise shown in the plans.

ENCASED POST FOR SHALLOW MOUNT



INSTALLED SECTION — INSTALLED PLAN

NOTES:

1. INSTALLATION: When the construction of Guardrail at the required post spacing results in post(s) placed within a concrete surface (typically a sidewalk), use a Frangible Leave-Out around the post base as shown. Install where shown in the plans and/or as-needed, in accordance with Specification 536.

   For the required 1'-6" x 1'-6" Leave-Out, smoothly cut the existing concrete surface or form-up the square shape when an application has new surrounding concrete.

   Ensure Flowable Fill surface is smooth and even with the adjacent concrete surface.
2. MATERIALS: Use Non-Excavatable Flowable Fill in accordance with Specification 121, not to exceed 150 psi.

NOTES:

1. INSTALLATION: Install Barrier Delineators as shown in accordance with the plans, with Specifications 536 and 705, and with the manufacturer's design as approved on the APL.
2. MATERIALS: Use materials of the size and type defined for Barrier Delineators in Specifications 993.
3. COLOR: Use either white or yellow retroreflective sheeting to match the color of the nearest lane's edgeline.
4. MOUNT LOCATIONS: Mount Barrier Delineators atop posts as shown, starting with Post (3) of Approach Terminals and incrementally increasing spacing towards the downstream direction. Install the Barrier Delineators at the following spacing:

   S1 = 25' x 1 Space
   S2 = 50' x 1 Space
   S3 = 75' x 1 Space
   S4 = 100' x for the Remaining Run

   Additionally, place a Barrier Delineator on Post (2) of the Trailing Anchorage or on the post nearest the Rigid Barrier.
5. MEDIAN GUARDRAIL: Install retroreflective sheeting on both sides of the barrier delineator for Guardrail on medians.

NOTES:

1. INSTALLATION: Work these details with the plans, where Stationing for Begin/End Half Spacing and Begin/End Quarter Spacing are indicated if required.

   Where the Begin/End Stations indicated in the plans do not correspond exactly to post locations in construction, extend the Reduced Post Spacing segment to the nearest post(s) before the Begin Station and/or after the End Station called for.
2. PANEL SPLICES: Midspan Panel Splices are not required in Transition and Reduced Post Spacing segments, however they are required for General segments. To place midspan splices in General segments, use one Non-General panel length (9'-4½" or 15'-7½") or add an additional Transition spaced post where required.
3. LOW-SPEED GUARDRAIL: For Reduced Post Spacing with Low-Speed Guardrail (12'-6" post spacing), the Reduced Spacing pattern requires a 6'-3" space between the 12'-6" and 3'-1½" spaces.
4. PANEL POST BOLT SLOTS: For Quarter Spacing configurations, punch additional ¾"x2½" Post Bolt Slots in the panels only where required for mounting and in accordance with Specification 536.

GENERAL TREE PROTECTION NOTES:

1. ANY PROPOSED CONSTRUCTION ACTIVITY WITHIN THE CPZ WILL REQUIRE THE TREE TO BE REMOVED UNLESS A LICENSED/CERTIFIED ARBORIST WORKING IN CONJUNCTION WITH LEON COUNTY'S ARBORIST, CAN MITIGATE ANY IMPACTS TO THE TREE. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ANY TREE MITIGATION REPLACEMENTS REQUIRED BY LEON COUNTY.

2. IN THE EVENT AN IMPACTED TREE HAS BEEN RECOMMENDED TO BE SAVED BY A LICENSED/CERTIFIED ARBORIST AND THE TREE ARBORIST FOR LEON COUNTY, ALL REQUIREMENTS AND CONDITIONS REQUESTED BY LEON COUNTY SHALL BE PERFORMED BY THE CONTRACTOR IN A TIMELY MANOR IN CONJUNCTION WITH THE CONSTRUCTION SEQUENCING TO MINIMIZE FURTHER DAMAGE TO THE TREE.

3. ALL TREE ROOTS 3/4" DIAMETER AND LARGER EXPOSED DURING TRENCHING AND EXCAVATION SHALL BE CLEANLY CUT WITH A HANDSAW AND COVERED IMMEDIATELY WITH SOIL OR KEPT MOISTENED WITH WET BURLAP OR PEAT MOSS UNTIL THE TRENCH CAN BE FILLED. WHEN IT IS NOT POSSIBLE TO BACKFILL THE SAME DAY, THE ROOTS SHALL BE RECUT WITH A HANDSAW A REASONABLE DISTANCE FROM THE ORIGINAL CUT AND BACKFILLED IMMEDIATELY TO AVOID SOIL OR ROOT DEHYDRATION. ALL ENCOUNTERED ROOTS SHALL BE TREATED AS APPROPRIATE.

4. THE CONTRACTOR IS RESPONSIBLE FOR THE PROTECTION OF ALL TREES AND LANDSCAPING ON ADJACENT PROPERTIES, AND WILL BE SOLELY LIABLE FOR DAMAGE TO VEGETATION ON PROPERTIES ADJACENT TO CONSTRUCTION WORK ZONES. THE CONTRACTOR SHALL PRESERVE AND PROTECT ALL TREES WITHIN THE VICINITY OF CONSTRUCTION THAT ARE NOT SHOWN ON THE PLANS TO BE REMOVED. A TREE PROTECTION BARRICADE IS TO BE INSTALLED AT OR NEAR THE CRITICAL PROTECTION ZONE (CPZ) OF EACH TREE PRIOR TO INITIATION OF ANY CONSTRUCTION ACTIVITY AND SHALL REMAIN IN PLACE UNTIL ALL CONSTRUCTION ACTIVITIES ARE COMPLETED.

5. THE LEON COUNTY DEPARTMENT OF DEVELOPMENT SUPPORT AND ENVIRONMENTAL MANAGEMENT (850) 606-1300 WILL BE NOTIFIED 48 HOURS IN ADVANCE OF CONSTRUCTION AND INVITED TO THE PRE-CONSTRUCTION MEETING.

6. THE CONTRACTOR SHALL PROTECT THE CRITICAL PROTECTION ZONE (CPZ) OF ALL PROTECTED TREES ON THE PROJECT NOT DESIGNATED FOR REMOVAL IN THE PLANS OR AS DIRECTED BY THE ENGINEER WITH A TREE PROTECTION BARRICADE. THE CPZ IS A CIRCLE AROUND THE TREE HAVING A RADIUS OF 1' FOR EACH INCH OF THE TREE'S DIAMETER AT BREAST HEIGHT (DBH). THE CONTRACTOR SHALL CONTACT THE CITY OF TALLAHASSEE ENVIRONMENTAL DEPARTMENT ONCE THE PROTECTION MEASURES ARE IN PLACE AND PRIOR TO THE START OF CONSTRUCTION.

7. THE TREE PROTECTION BARRICADE SHALL BE CONSTRUCTED TO PROTECT THE CPZ TO THE GREATEST EXTENT POSSIBLE TO PREVENT ENCROACHMENT BY CONSTRUCTION EQUIPMENT, REMOVAL OF GROUND COVER, DISTURBANCE OR COMPACTION OF SOIL, OR DAMAGE TO THE ROOT SYSTEM. BARRICADES SHALL TERMINATE AT THE LIMITS OF CONSTRUCTION AND IN NO CASE SHALL IMPEDE ON THE ROADWAY PAVEMENT.

8. THERE SHALL BE NO STORAGE OF MATERIALS OR EQUIPMENT IN THE CPZ. REFER TO THE TREE PROTECTION BARRICADE DETAIL THIS SHEET. THE CONTRACTOR SHALL NOT PERFORM ANY WORK IN THE CPZ UNLESS APPROVED MITIGATION METHODS ARE FOLLOWED.

   - CUT MITIGATION: SAW CUT ROOTS 12 INCHES FROM THE EDGE OF UTILITY TRENCH CLOSEST TO THE TREE. REMOVE ALL ROOTS SO THAT THE UTILITY MAY BE INSTALLED. IF THE SAW CUT IS WITHIN 5 FEET OF THE TRUNK COLLAR OR REMOVED ROOTS ARE GREATER THAN 6 INCHES IN DIAMETER, CALL IN AN URBAN FORESTER IN ANTICIPATION OF TREE REMOVAL.

9. THE CONTRACTOR SHALL BEGIN WATERING IMPACTED TREES TWO WEEKS PRIOR TO USING ONE OF THE MITIGATION METHODS AND CONTINUE WATERING THROUGH SUBSTANTIAL COMPLETION OF THE PROJECT. IMPACTED TREES SHALL BE WATERED BY MECHANICAL IRRIGATION OR MANUALLY AT A RATE EQUIVALENT TO 1" OF WATER PER WEEK. WATER SHALL BE ADJUSTED AS REQUIRED BY LOCAL WEATHER CONDITIONS. PROVIDE APPROVED RAIN GAUGES ON SITE AS REQUIRED TO VERIFY APPLICATION RATES.

GENERAL NOTES

1. A Soil Tracking Prevention Device (STPD) shall be constructed at locations designated by the engineer for points of egress from unstabilized areas of the project to public roads where off-site tracking of mud could occur. Traffic from unstabilized areas of the construction project shall be directed thru a STPD. Barriers, flagging, or other positive means shall be used as required to limit and direct vehicular egress across the STPD.
2. The Contractor may propose an alternative technique to minimize off-site tracking of sediment. The alternative must be reviewed and approved by the Engineer prior to its use.
3. All materials spilled, dropped, or tracked onto public roads (including the STPD aggregate and construction mud) shall be removed daily, or more frequently if so directed by the Engineer.
4. Aggregates shall be as described in Section 901 excluding 901-2.3. Aggregates shall be FDOT size #1. If this size is not available, the next available smaller size aggregate may be substituted with the approval of the Engineer. Sizes containing excessive small aggregate will track off the project and are unsuitable.
5. The sediment pit should provide a retention volume of 3600 cubic feet/acre of surface area draining to the pit. When the STPD is isolated from other drainage areas, the following pit volumes will satisfy this requirement:
   15' x 50'=100 ft.³ 30' x 50'=200 ft.³
   As an option to the sediment pit, the width of the swale bottom can be increased to obtain the volume. When the sediment pit or swale volume has been reduced to one half, it shall be cleaned. When a swale is used, synthetic bales or silt fence shall be placed along the entire length.
6. The swale ditch draining the STPD shall have a 0.02% minimum and a 1.0% maximum grade along the STPD and to the sediment pit.
7. Mitered end sections are not required when the sidedrain pipe satisfies the clear zone requirements.
8. The STPD shall be maintained in a condition that will allow it to perform its function. To prevent off-site tracking, the STPD shall be rinsed (daily when in use) to move accumulated mud downward thru the stone. Additional stabilization of the vehicular route leading to the STPD may be required to limit the mud tracked.
9. A STPD shall be paid for under the contract unit price for Soil Tracking Prevention Device, EA. The unit price shall constitute full compensation for construction, maintenance, replacement of materials, removal, and restoration of the area utilized for the STPD; including but not limited to excavation, grading, temporary pipe (including MES when required), filter fabric, aggregate, paved turnout (including asphalt and base construction), ditch stabilization, approach route stabilization, sediment removal and disposal, water, rinsing and cleaning of the STPD and cleaning of public roads, grassing and sod. Synthetic Bale or Bale Type Barrier shall be paid for under the contract unit price for Synthetic Bales, LF. Silt fence shall be paid for under the contract unit price for Staked Silt Fence, LF.
10. The nominal size of a standard STPD is 15' x 50' unless otherwise shown in the plans. If the volume of entering and existing vehicles warrant, a 30' width STPD may be used if approved by the Engineer. When a double width (30') STPD is used, the pay quantity shall be 2 for each location.

11. *When used to control sediments from a steep slope, silt fences should be placed away from the toe of the slope for increased holding capacity (see* ***Figure 3.44****).*
12. *Silt fences shall be removed when they have served their useful purpose, but not before the upslope area has been permanently stabilized.*

THE OFFICER SHALL BE CERTIFIED UNDER THE FLORIDA STORMWATER, EROSION, AND SEDIMENT CONTROL INSPECTOR TRAINING PROGRAM AND SHALL BE AVAILABLE IN PERSON OR BY PHONE AT ALL TIMES DURING CONSTRUCTION.
4. THE STORMWATER CONTROL OFFICER SHALL BE RESPONSIBLE FOR CONTINUALLY MONITORING WEATHER CONDITIONS AND EVALUATE THE EFFECTIVENESS OF THE CONTROL MEASURES THROUGHOUT ALL PHASES OF CONSTRUCTION.
5. AS CONSTRUCTION PROGRESSES, THE STORMWATER CONTROL OFFICER SHALL MAKE ADJUSTMENTS AND/OR INSTALL ADDITIONAL MEASURES TO PREVENT DIRECT FLOW OR TRACKING OF SEDIMENTS ONTO ADJACENT PROPERTY, CONSERVATION AREAS, PUBLIC STREETS, OR DRAINAGE SYSTEMS.
6. CONTRACTOR SHALL BE RESPONSIBLE FOR REVISIONS TO AND IMPLEMENTATION OF THE SWPP WITHIN SEVEN (7) CALENDAR DAYS FOLLOWING AN INSPECTION WHEN ADDITIONS OR MODIFICATIONS TO BEST MANAGEMENT PRACTICES (BMPS) ARE NECESSARY TO CORRECT OBSERVED PROBLEMS. REVISIONS SHALL OCCUR WHENEVER:
   - A SIGNIFICANT CHANGE IN THE DESIGN, CONSTRUCTION, OPERATION, OR MAINTENANCE AT THE CONSTRUCTION SITE HAS A SIGNIFICANT EFFECT ON THE DISCHARGE OF POLLUTANTS TO THE WATERS OF THE UNITED STATES NOT PREVIOUSLY ADDRESSED IN THE DOCUMENT.
   - DISCHARGES ARE CAUSING WATER QUALITY EXCEEDANCES, AS DEFINED BY THE EPA, OR THE BMPS ARE INEFFECTIVE IN MINIMIZING POLLUTANTS IN STORMWATER DISCHARGE FROM THE CONSTRUCTION SITE.
7. TEMPORARY EROSION AND SEDIMENT CONTROL DEVICES SHALL BE PLACED ADJACENT TO ANY WATERWAY OR DRAINAGE FEATURE PRIOR TO CONSTRUCTION AND REMAIN IN PLACE UNTIL CONSTRUCTION OF THE FEATURE IS COMPLETE AND ALL AREAS SUITABLY STABILIZED.

9. EROSION CONTROL ITEMS ARE ESTIMATED FOR PREVENTION, CONTROL, ABATEMENT OF EROSION, SEDIMENTATION AND WATER POLLUTION. THESE ITEMS ARE TO BE USED AT LOCATIONS DESCRIBED IN THE APPROVED SWPP OR AS DIRECTED BY THE OWNER OR OWNER'S DESIGNATED REPRESENTATIVE TO COMPLY WITH ALL FEDERAL, STATE, AND LOCAL REGULATIONS.
10. IF ADDITIONAL SEDIMENT AND EROSION CONTROL MEASURES BECOME REQUIRED DURING THE PROJECT'S DURATION, CONTRACTOR SHALL MAKE ADJUSTMENTS AT NO ADDITIONAL COST TO OWNER.
11. CONTRACTOR SHALL NOT BRING ANY HAZARDOUS MATERIALS ONTO THE PROJECT SITE. SHOULD CONTRACTOR REQUIRE SUCH FOR PERFORMING THE CONTRACTED WORK, CONTRACTOR SHALL REQUEST, IN WRITING, WRITTEN PERMISSION FROM THE OWNER OR THE OWNER'S DESIGNATED REPRESENTATIVE. CONTRACTOR SHALL PROVIDE THE OWNER OR OWNER'S DESIGNATED REPRESENTATIVE WITH A COPY OF THE MATERIAL SAFETY DATA SHEET (MSDS) FOR EACH HAZARDOUS MATERIAL PROPOSED FOR USE. SINCE STATE LAW DOES NOT TREAT PETROLEUM PRODUCTS THAT ARE PROPERLY CONTAINERIZED AND INTENDED FOR EQUIPMENT USE AS A HAZARDOUS MATERIAL, SUCH PRODUCTS DO NOT NEED THE MSDS SUBMITTAL. ANY KNOWN OR SUSPECTED HAZARDOUS MATERIAL FOUND ON THE PROJECT BY CONTRACTOR SHALL BE IMMEDIATELY REPORTED TO THE OWNER OF OWNER'S DESIGNATED REPRESENTATIVE AND WHO SHALL PROTECT THE AREA OS SUSPECTED CONTAMINATION FREE FURTHER ACCESS. THE OWNER OF OWNER'S DESIGNATED REPRESENTATIVE WILL ARRANGE FOR INVESTIGATION, IDENTIFICATION, AND REMEDIATION OF THE HAZARDOUS MATERIAL. CONTRACTOR SHALL NOT RETURN TO THE AREA OF CONTAMINATION UNTIL APPROVAL IS PROVIDED BY THE OWNER OF OWNER'S DESIGNATED REPRESENTATIVE.
12. ALL VEGETATIVE MATERIALS SHALL BE SUBJECT TO INSPECTION PRIOR TO PLACEMENT. ANY SOD WITH NOXIOUS WEEDS AND GRASSES SHALL BE REJECTED FOR USE ON THE PROJECT. CONTRACTOR SHALL FURNISH THE OWNER OR OWNER'S DESIGNATED REPRESENTATIVE, PRIOR TO INCORPORATION INTO THE PROJECT, A CERTIFICATION FROM THE FLORIDA DEPARTMENT OF AGRICULTURE AND CONSUMER SERVICE DIVISION OF PLANT INDUSTRY, STATING THAT THE SOD, HAY, STRAW, AND MULCH MATERIAL ARE FREE OF NOXIOUS WEEDS.

TRASH COLLECTION POINTS SHALL BE LOCATED WHERE THEY WILL BE LEAST IMPACTED BY CONCENTRATED STORMWATER RUNOFF.
15. DEMOLITION AND ACCESS AREAS -- DUST CONTROL TECHNIQUES SHALL BE USED DURING DEMOLITION WHERE LARGE AMOUNTS OF DUST ARE GENERATED. IF WATER OR SLURRY IS USED TO CONTROL DUST, IT SHALL BE CONTAINED ON-SITE.
16. WASHING AREA -- AN AREA SHALL BE DESIGNATED BY THE CONTRACTOR FOR WASHING VEHICLES AND WILL BE LOCATED WHERE THE RUNOFF CAN BE COLLECTED IN A TEMPORARY HOLDING OR SEEPAGE BASIN. WASH AREA SHALL HAVE GRAVEL BASE.
17. STORAGE OF CONSTRUCTION MATERIALS -- AN ISOLATED AREA SHALL BE DESIGNATED TO STORE CHEMICALS, CEMENTS, SOLVENTS, PAINTS OR OTHER POTENTIAL POLLUTANTS. THE AREA SHALL LOCATED AS TO ELIMINATE RUNOFF POLLUTION. TOXIC CHEMICALS AND MATERIALS, SUCH AS PESTICIDES, PAINTS, AND ACIDS, SHALL BE STORED ACCORDING TO THE MANUFACTURER'S GUIDELINES. GENERAL NOTES:

1. ALL PLANT MATERIAL SHALL BE FLORIDA #1 AS CLASSIFIED IN "GRADES AND STANDARDS FOR NURSERY PLANTS 2015, FIFTH EDITION, PUBLISHED BY THE FLORIDA DEPARTMENT OF AGRICULTURE AND CONSUMER SERVICES.
2. QUANTITIES ON LANDSCAPE PLAN ARE MINIMUM ONLY. CONTRACTOR IS RESPONSIBLE FOR HIS OWN QUANTITY TAKE-OFF, AND SHALL PROVIDE ALL PLANT MATERIAL REQUIRED TO FILL PLANT BED AREA AT SPACING ON PLANT SCHEDULE.
3. INSTALL PINE STRAW MULCH (OR APPROVED EQUAL) WITHIN ALL LANDSCAPE AREAS AT A MINIMUM OF 3" COMPACTED THICKNESS. IF AN INDIVIDUAL TREE (NEWLY PLANTED OR EXISTING) IS SURROUNDED BY TURF, THE MULCH AREA SHALL BE DESCRIBED AS THE DIAMETER OF THE TRUNK IN TERMS OF RADIUS IN FEET. FOR EXAMPLE: 3" CALIPER TREE = 3' RADIUS (6' DIAMETER) MULCH AREA. DO NOT PILE MULCH AROUND THE TRUNK OR ROOT FLARE.
4. ALL REQUIRED LANDSCAPE AREAS AND BUFFER STRIPS SHALL BE PROVIDED WITH AN IRRIGATION SYSTEM TO ALLOW 100 PERCENT COVERAGE OR PROVIDED WITH TEMPORARY / MANUALLY APPLIED APPLICATIONS. CONTRACTOR SHALL PROVIDE AN UNDERGROUND PERMANENT IRRIGATION SYSTEM, AN ABOVE-GROUND TEMPORARY IRRIGATION SYSTEM UNTIL LANDSCAPING IS ESTABLISHED OR MANUALLY IRRIGATE FROM WATER SOURCE/WATER TRUCK UNTIL LANDSCAPING IS ESTABLISHED - AS SHOWN ON THE IRRIGATION PLAN. ALL IRRIGATION LINES SHALL BE INSTALLED SO AS TO NOT IMPACT THE CRITICAL PROTECTION ZONE OF PROTECTED TREES USED AS CREDIT. THESE PROTECTED TREES SHALL BE CLEARLY MARKED IN THE FIELD AND ANY NECESSARY IRRIGATION DISTURBANCE SHALL BE APPROVED BY THE CONSULTING LANDSCAPE ARCHITECT PRIOR TO INSTALLATION. CONTRACTOR SHALL NOTIFY COUNTY INSPECTORS IN ADVANCE PRIOR TO ANY POTENTIAL DISTURBANCE.
5. SOD ALL DISTURBED AREAS AND SLOPES GREATER THAN 4:1 UNLESS INDICATED TO CONTAIN SEED & MULCH, SHRUBS, GROUNDCOVER, MULCH OR OTHER MATERIAL.
6. CONTRACTOR SHALL GUARANTEE PLANTS FOR A PERIOD OF ONE YEAR FROM TIME OF INSTALLATION.
7. PERFORM A SOIL TEST AND APPLY THE NECESSARY AMENDMENTS AND/OR FERTILIZER. THE PLANTING AREAS SHALL NOT BE UNSUITABLE COMPACTED BACKFILL, BUT FERTILE WELL-DRAINED LOAMY TOPSOIL WITH AN APPROPRIATE RATIO OF NITROGEN, POTASSIUM, PHOSPHORUS AND MICRO-NUTRIENTS (CORRESPONDING TO THE NEEDS OF A SOIL TEST). THE NUTRIENTS SHALL NOT TO EXCEED THE REQUIREMENT IN SECTION 10-14.105 OF THE LEON COUNTY LAND DEVELOPMENT CODE.
8. A 36" CLEAR SPACE SHALL BE MAINTAINED AROUND THE CIRCUMFERENCE OF FIRE HYDRANTS EXCEPT AS OTHERWISE REQUIRED OR APPROVED.

EMBED SOD FIRMLY AND SMOOTHLY BY LIGHT TAMPING WITH APPROPRIATE TOOLS. INSTALL SOD PINS IN THE OVERLAP LOCATIONS, WITH NOT LESS THAN FOUR PINS PER SQUARE YARD AND AT LEAST ONE PIN FOR EACH PIECE OF SOD. PINS SHALL BE A MINIMUM OF 6 INCHES LONG AND SHALL BE INSTALLED SO THAT THEY HOLD THE SOD FIRMLY IN PLACE YET PRESENT NO DANGER TO PEDESTRIANS OR MOWING CREWS. THE TYPE OF PIN AND THE METHOD OF INSTALLATION SHALL MEET THE APPROVAL OF THE ENGINEER OR LANDSCAPE ARCHITECT.

9. PIPING MAY SOMETIMES BE INDICATED AS BEING LOCATED IN UNLIKELY AREAS; I.E., IN BUILDINGS, UNDER PAVEMENT, OUTSIDE OF PROPERTY LINES, ETC... THIS IS DONE FOR GRAPHIC CLARITY ONLY. WHENEVER POSSIBLE, PIPING IS TO BE INSTALLED IN SOIL AREAS.
10. MAINLINE IS TO BE INSTALLED A MINIMUM OF 18" BELOW FINISH GRADE. LATERAL LINES ARE TO BE INSTALLED A MINIMUM OF 14" BELOW FINISH GRADE.
11. UNLESS OTHERWISE INDICATED, ALL SLEEVES ARE TO BE PVC SCH 40 AND TWO (2) SIZES LARGER THAN THE PIPE TO BE SLEEVED. FOR EXAMPLE: THE SLEEVE FOR A 1" PIPE SHALL BE 1-1/2" PVC SCH 40. NO IRRIGATION SLEEVE SHALL BE SMALLER THAN 1-1/2".
12. ALL IRRIGATION MAINLINES SHALL BE PVC SCH 40 UNLESS OTHERWISE NOTED.
13. ALL IRRIGATION LATERALS SHALL BE PVC CLASS 200 PLASTIC PIPE UNLESS OTHERWISE NOTED.
14. EXACT CONTROLLER LOCATION SHALL BE DETERMINED IN THE FIELD AT THE TIME OF INSTALLATION AND APPROVED BY THE LANDSCAPE ARCHITECT.
15. LIGHTNING PROTECTION SHALL BE INSTALLED ON EACH CONTROLLER: A 5/8" x 8' COPPER CLAD LIGHTNING GROUND ROD W/5 OHMS OR LESS RESISTANCE TO EARTH AND CONNECTED TO THE CONTROLLER.
16. THE IRRIGATION CONTRACTOR SHALL BE RESPONSIBLE FOR BRINGING ELECTRICAL POWER TO THE CONTROLLER LOCATION.
17. WHERE APPLICABLE, MAINLINE AND LATERAL SHALL BE PLACED IN SAME TRENCH OR AS SHOWN ON DETAIL.
18. ALL IRRIGATION HEADS SHALL BE A MINIMUM OF 12" FROM BUILDINGS AND WALLS. ALL IRRIGATION HEADS SHALL BE A MINIMUM OF 6" FROM PAVEMENT EDGES.
19. THE IRRIGATION CONTRACTOR MAY HAVE TO MAKE FIELD ADJUSTMENTS. ANY SUBSTANTIAL DEVIATIONS TO THE PLAN SHALL REQUIRE THE IRRIGATION CONTRACTOR TO PROVIDE AS-BUILT DRAWING(S) OF THE CONSTRUCTED SYSTEM.

IRRIGATION SPECIFICATIONS

1. GENERAL/PRODUCTS
 1.1. SYSTEM SHALL CONFORM TO ALL LOCAL CROSS-CONNECTIONS, PLUMBING AND ELECTRICAL CODES.
 1.2. ALL MATERIALS TO BE INCORPORATED IN THIS SYSTEM SHALL BE NEW AND WITHOUT FLAWS OR DEFECTS. ALL PIPE DAMAGED OR REJECTED BECAUSE OF DEFECTS SHALL BE REMOVED, WITH EXCEPTION TO RELOCATED MATERIAL, FROM THE SITE AT THE TIME OF REJECTION.
 1.3. IT IS THE CONTRACTOR'S RESPONSIBILITY TO INSURE AND GUARANTEE COMPLETE 100% COVERAGE OF THE AREAS SHOWN ON THE DRAWINGS TO BE IRRIGATED. HE SHALL ALSO GUARANTEE THE SATISFACTORY OPERATION OF THE ENTIRE SYSTEM AND THE RESTORATION OF THE SITE PRIOR TO WORK.
 1.4. THE ENTIRE SYSTEM SHALL BE GUARANTEED TO BE COMPLETE AND FULLY OPERATIONAL FOR THE PERIOD OF ONE YEAR FROM THE DATE OF ACCEPTANCE. CONTRACTOR SHALL REPAIR OR REPLACE ANY DEFECTS OCCURRING WITHIN THAT YEAR, FREE OF EXPENSE TO THE OWNER.
 1.5. AFTER FINAL ACCEPTANCE OF THE COMPLETED INSTALLATION, THE CONTRACTOR SHALL BE RESPONSIBLE FOR HAVING COMPLETE REPRODUCIBLE DRAWINGS PREPARED AND SHOWING ALL CHANGES. THESE DRAWINGS SHALL BE TURNED OVER TO THE OWNER.
 1.6. PLASTIC PIPE LINE SHALL BE RIGID UN-PLASTICIZED, BELL END, PVC TYPE (1102,2120, ETC), SCHEDULE 40 PVC (ASTM-1785).
 1.7. ALL PLASTIC PIPE FITTINGS SHALL BE SCHEDULE 40 PVC (ASTM D-2466) MOLDED FITTINGS MANUFACTURED OF THE SAME MATERIAL AS THE PIPE.

2. AS-BUILTS
 2.1. STATIC PRESSURE OF THE WATER SOURCE SHALL BE MEASURED AND NOTED ON THE SHOP DRAWINGS.
 2.2. THE PRESSURE LOSS THROUGH THE SYSTEM SHALL BE INCLUDED AS PART OF THE SHOP DRAWINGS.
 2.3. THE MAXIMUM AND MINIMUM PRESSURE AT THE BASE OF THE CLOSEST AND FURTHEST SPRINKLER SHALL BE INDICATED ON THE SHOP DRAWING.
 2.4. ADEQUATE PRESSURE RELIEF, SURGE PROTECTION, THRUST RESTRAINT, AND AIR RELIEF VALVES SHALL BE USED FOR ALL PIPING.

3. HYDROSTATIC TESTS
 3.1. TESTING OF THE INSTALLED SYSTEM SHALL BE REQUESTED OF THE CONTRACTOR BY THE OWNER IN WRITING AT LEAST 48 HOURS IN ADVANCE OF THE TEST.
 3.2. TESTING SHALL BE ACCOMPLISHED AT THE EXPENSE OF THE CONTRACTOR AND IN THE PRESENCE OF THE OWNER.
 3.3. WHEN TESTING WITH OPEN TRENCHES, CENTER LOAD PIPING WITH SMALL AMOUNT OF BACKFILL TO PREVENT ARCHING OR SLIPPING UNDER PRESSURE.
 3.4. MAIN LINES AND SUB-MAINS SHALL BE TESTED FOR TWO HOURS AND LATERAL LINES FOR ONE HOUR.
 3.5. IF LINES OR FITTINGS DO NOT HOLD OR MORE THAN 5 PSI IS LOST DURING TESTING, THE CONTRACTOR MUST MAKE CORRECTIONS AND RESCHEDULE TESTING.

4. EXECUTION
 4.1. ALL PRESSURIZED PLASTIC AND GALVANIZED PIPE, SPRINKLER LINES OR MAINS SHALL BE INSTALLED WITH A MINIMUM COVER OF 18 INCHES BASED ON FINISHED GRADES. NON-PRESSURIZED LINES SHALL BE INSTALLED WITH A MINIMUM COVER OF 12" BASED ON FINISHED GRADE.
 4.2. DEPTH OF SLEEVES UNDER ASPHALT OR CONCRETE SHALL BE 24", EXCEPT 30" FOR 6" AND LARGER PIPES, WHERE ANY CUTTING OR BREAKING OF SIDEWALKS, CONCRETE WORK AND/OR ASPHALT IS NECESSARY, IT SHALL BE REMOVED AND REPLACED BY THE CONTRACTOR. PERMISSION TO CUT OR BREAK SIDEWALKS, CONCRETE AND/OR ASPHALT SHALL BE OBTAINED FROM THOSE HAVING PROPER JURISDICTION.
 4.3. PIPE USED ABOVE GROUND WITH BACKFLOW PREVENTION DEVICES OR PUMPING STATIONS SHALL BE SCHEDULED 40 GALVANIZED STEEL (ASTM A-120/A-53) AND JOINTED WITH 150 POUND TESTED GALVANIZED MALLEABLE IRON PIPE FITTINGS (ASTM A-338). PIPE OF THE ABOVE TYPE SHALL BE ANCHORED WITH ONE CUBIC FOOT OF CONCRETE.
 4.4. THE BACKFILL SHALL BE THOROUGHLY COMPACTED AND EVENED OFF WITH THE ADJACENT SOIL LEVEL. BACKFILL SHALL CONTAIN NO LUMPS OR ROCKS LARGER THAN 2 1/2".
 4.5. TRENCHES SHALL BE OPENED AND BACKFILLED ON THE SAME DAY.
 4.6. PLASTIC PIPE SHALL BE INSTALLED ACCORDING TO ASTM D-2855, ASAES-376, AND SCS 430-DD-1. PIPE SHALL BE INSTALLED AS RECOMMENDED BY THE MANUFACTURER TO ALLOW FOR EXPANSION, CONTRACTION AND SNAKING.

  4.9.4. REAPPLY A LIGHT COAT OF SOLVENT TO THE PIPE AND IMMEDIATELY INSERT INTO THE FITTING.
  4.9.5. TURN THE PIPE OR FITTING ONE QUARTER TO INSURE EVEN DISTRIBUTION IN THE SOCKET. INSERT PIPE TO THE FULL DEPTH OF THE FITTING SOCKET.
  4.9.6. WIPE OFF ANY EXCESS SOLVENT THAT APPEARS AT THE OUTER SHOULDER OF THE FITTING. DO NOT USE AN EXCESSIVE AMOUNT OF SOLVENT SO AS TO AVOID ANY OBSTRUCTION TO FORM ON THE PIPE. ALLOW JOINTS TO SET A MINIMUM OF 24 HOURS BEFORE PRESSURE IS APPLIED TO THE SYSTEM.
 4.10. ALL OPENINGS SHALL BE CAPPED OR PLUGGED FOLLOWING THE INSTALLATION OF LINES TO PREVENT THE ENTRANCE OF MATERIALS THAT WOULD OBSTRUCT THE PIPE OR SPRINKLERS. LEAVE PLUG OR CAP IN PLACE UNTIL REMOVAL IS NECESSARY FOR COMPLETION OF INSTALLATION.
